

Git Learning - Complete 30 Steps

1. Create GitHub Account

Create a GitHub account with username Ganesh4152. Why: GitHub stores repositories online.

2. Install Git

Install Git on Windows. Verify using: `git --version`.

3. Configure Git

`git config --global user.name "Ganesh4152"` and `git config --global user.email "ganikings.g@gmail.com"`.

4. Verify Configuration

Use `git config --list`, `git config user.name`, `git config user.email`.

5. Create Local Project

Create a folder such as `D:/GitProjects/EmployeeApp`.

6. Navigate to Project

`cd D:/GitProjects/EmployeeApp`.

7. Initialize Repository

`git init` creates the hidden `.git` directory.

8. Check Status

`git status` shows repository status.

9. Create Project Files

Create `README.md` and `index.html`.

10. Check Status Again

`git status` shows untracked files.

11. Stage Files

`git add .` stages files.

12. Verify Staged Files

`git status` confirms staged files.

13. Commit Changes

`git commit -m "Initial Project Commit"`.

14. View History

git log or git log --oneline.

15. Create GitHub Repository

Create EmployeeApp repository without README.

16. Copy Repository URL

Copy the HTTPS repository URL.

17. Connect Remote

git remote add origin .

18. Verify Remote

git remote -v.

19. Rename Branch

git branch -M main.

20. Push Code

git push -u origin main.

21. Verify on GitHub

Refresh GitHub and confirm files.

22. Modify File

Edit README.md.

23. Check Status

git status.

24. Stage Modified File

git add README.md or git add .

25. Commit Update

git commit -m "Updated README file".

26. Push Update

git push.

27. Clone Repository

git clone .

28. Pull Latest Changes

`git pull.`

29. Create Feature Branch

`git checkout -b login-feature.`

30. Merge Feature Branch

`git checkout main, git merge login-feature, git push.`
